## 1. Abstract

International standards on technologies, on interfaces, on application, on security and on privacy are essential for harmonization of eID programs in the public domain in Europe, simplify the *FutureID* requirements and increase the acceptance of eID in Web- and Cloud application. D13.3 analyse all existing relevant standards on technologies, on interfaces, on application, on security and on privacy, mirror possible gaps in international standards and highlight actions in the standardization area, foster mainly from the industry member of FutureID. D13.4 provides an overview of these arguments.
