Lead Participant	FHG	Lead Author	Raik Kuhlisch (FHG) Ben Kraufmann (FHG)
Contributors		Reviewers	David Derler (TUG), Paolo Modesti (UNEW)

Abstract: This document gives a description of the performed operational tests in order to validate the FutureID solution.

This document is issued within the frame and for the purpose of the *FutureID* project. This project has received funding from the European Union's Seventh Framework Programme (FP7/2007-2013) under Grant Agreement no. 318424.

This document and its content are the property of the *FutureID* Consortium. All rights relevant to this document are determined by the applicable laws. Access to this document does not grant any right or license on the document or its contents. This document or its contents are not to be used or treated in any manner inconsistent with the rights or interests of the *FutureID* Consortium or the Partners detriment and are not to be disclosed externally without prior written consent from the *FutureID* Partners.

Each *FutureID* Partner may use this document in conformity with the *FutureID* Consortium Grant Agreement provisions.

1. Executive Summary

The FutureID project builds a comprehensive, flexible, privacy-aware and ubiquitously usable identity management infrastructure for Europe. To demonstrate and evaluate its deliverables, FutureID develops two pilot applications. One of the two pilot applications of FutureID covers citizen services. Hence, epSOS – a project co-financed by the European Commission for a pan-European health data exchange cross border – was chosen to be extended with FutureID technology, thus reflecting the overlap of FutureID and epSOS. The following use cases complement existing epSOS functionalities:

- Digitally sign a patient privacy consent acknowledgment document in the country of treatment
- Authenticate patient by means of certification authority means in the patient's country of affiliation

This report describes the performed operational tests, which were used to validate the successful integration of FutureID technology within the epSOS reference implementation OpenNCP.
